## Data Scientist

Dear Team,

As a recent Data Science graduate certified by Simplilearn in collaboration with Purdue university, I have spent the past 8months immersing myself in **Natural language processing, Computer vision, Machine / Deep learning ,Big data analytics and Aws services**. I'm excited to bring my expertise to the company as a **Data Scientist / ML Engineer**.

I am passionate about data and using that to create business impact, which led me to pursue training in AI/ML and Data Science. In my most recent **two internships**, I was responsible for forecasting with time series data and developed an end-to-end NLP media news analysis system. My responsibilities included **web scraping, exploratory data analysis, feature engineering, model building, and deployment**. I worked closely with the stakeholders to incorporate domain knowledge

I have extensive experience in all the essential **python libraries and algorithms**. I have worked on multiple NLP and computer vision projects over the past several months. I am committed to lifelong learning and aside from being a occupation, I genuinely love what I do. Knowing the **data engineering(hadoop/spark) / life cycle(mlops)** of a complete project would make me a great addition to the team. I would love to see myself grow in this company which gives opportunity and recognize people for their talents.

I have attached my **resume , github link** which further outlines my education and past experiences.

I appreciate your time and consideration, and I hope to hear from you soon

Sincerely,

John B Athappully
